PREFACE

The Office of the National Economic and Social Development Council (NESDC) is responsible for compilation of National Account Statistics for Thailand. The publications include National Income, Quarterly Gross Domestic Product, Gross Regional and Provincial Product, Flow-of-Funds Accounts, Capital Stock, and Input-Output Tables (I-O Tables). For I-O Tables, the arrangement for compilation and dissemination is performed on quinquennial basis. However, the coronavirus disease (COVID-19) adversely affected economic activities and production of goods and services globally in 2020. These similar impacts were also prevalent in Thai Economy. Therefore, the period for compilation of this I-O edition has been designated for the year 2021. The 2021 I-O Table has been compiled to reflect recent economic outlook. As a result, this new dataset would be appropriate for planning, policy formulation, and various aspects of economic analyses.

The I-O Tables essentially display input structure and output distribution in a systematic process. This set of information is important for studying economic and social policy impacts. Consequently, economic and social development plan, as well as policy prescriptions for both private and public sectors could be properly formulated. Moreover, this dataset is a quintessential input for economic modelling, tax calculation, producer price index, and measuring economic impacts from exogenous factors, such as petrol price, wages, and tourism revenue. Nevertheless, the compilation of I-O Tables requires substantial sets of data covering all economic activities. The NESDC conducted surveys including all economic sectors for updating input coefficients, which in turn suitably reflect the relationship among production activities of each sector.

The NESDC is grateful for detailed data and information which have been collected from various agencies, both public and private. The comments and suggestions are also particularly useful for further improvement to address users' needs. The NESDC would like to take this opportunity to kindly thank all of these agencies for provision of these valuable data and look forward to strengthening and continuing cooperation in the future.

Structure of Thai Economy from the 2021 Input-Output Tables

1. Total Supply

The total supply of goods and services in 2021 registered a value of 46,348,020 million baht, which consisted of 36,301,301 million baht of domestic production, accounting for 78.3% of total supply, and 10,046,719 million baht of imports, accounting for 21.7%. Meanwhile, the total supply in 2015 was valued at 41,618,640 million baht, which consisted of domestic production of 32,964,783 million baht (79.2%) and imports of 8,653,857 million baht (20.8%).

The total supply increased at the average annual growth rate by 1.7% between 2015 and 2021, owing to an increase in both domestic production and imports at the annual growth rates of 1.6% and 2.5%, respectively.

Domestic production in 2021 presented a value of 36,301,301 million baht, increased at the average annual growth rate of 1.6%, from domestic production of 32,964,783 million baht in 2015. Domestic production for 2021 comprised intermediate inputs of 20,564,218 million baht (56.6%) with an increase of average annual rate at 1.3%; and value added of 15,737,083 million baht (43.4%) with an increase of average annual rate at 2.1%.

However, comparing to the 2015 Input-Output Tables, the ratio of intermediate inputs to total supply decreased for 2021 meanwhile that of value added to total supply increased. The intermediate inputs consist of domestic raw materials of 65.3% and imports of raw materials 34.7%. 6. Forward and Backward Linkage Indices (FL and BL)

There are interrelationship and interdependency between activities in the economy. This linkage of activities can be induced both upstream and downstream. Analyzing this relationship, forward and backward linkage indices (FL and BL) can be calculated by using the following formulas.

Forward Linkage Index (FL)

$$\beta_i = \frac{\sum_j b_{ij}}{\frac{1}{n} \sum_i \sum_j b_{ij}} \quad (i = 1, 2, 3, \dots, n)$$

Backward Linkage Index (BL)

$$\alpha_j = \frac{\sum_i b_{ij}}{\frac{1}{n} \sum_j \sum_i b_{ij}} \quad (j = 1, 2, 3, \dots, n)$$

โดย	β_i	=	Forward Linkage Index
	α_j	=	Backward Linkage Index
	$\sum_j b_{ij}$	=	Column-wise Summation of Inverse Matrix
	$\sum_i b_{ij}$	=	Row-wise Summation of Inverse Matrix
	$\sum_i \sum_j b_{ij}$	=	Total Summation of Column-wise Summation of Inverse Matrix
	$\sum_j \sum_i b_{ij}$	=	Total Summation of Row-wise Summation of Inverse Matrix

If a particular sector demonstrates the value of forward linkage index (FL) relatively higher than its backward linkage index (BL), it is classified as an upstream sector. This indicates that the sector primarily provides inputs or raw materials for use in other industries. Conversely, if a sector has higher BL than FL, it is identified as a downstream sector, reflecting its reliance on outputs from upstream sectors as its production inputs.

Based on an analysis of 2021 linkage indices, the sectors with high degree of forward linkages included agriculture; mining and quarrying; rubber, chemical, and petroleum Industries; and metal, metal products and machinery. All of these sectors were classified as upstream industries which produced essential raw materials for further industrial processing. Similarly, several service sectors exhibited strong forward linkages, such as retail and wholesale trade and service industries, as they induced further production of other industries.

On the other hand, sectors such as foods manufacturing, non-metallic products, and construction demonstrated significant backward linkages. Therefore, they were classified as downstream industries. These sectors primarily utilized inputs from upstream industries in order to produce goods and services for both domestic consumption and exports.
