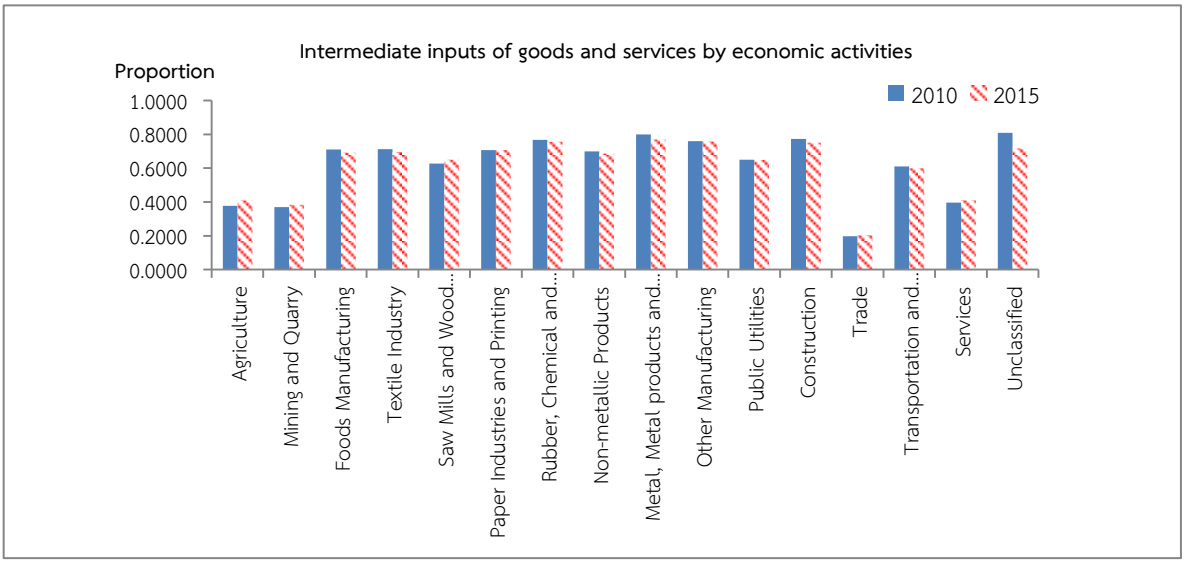
Chart 3 Input Coefficient by economic activities



## 6. Forward and Backward linkage ( FL and BL)

Activities in an economy are related and linked to each other. This linkage induces to other economic sectors, known as upstream and downstream industries. To analyze sectoral linkages, forward and backward linkages indices (FL and BL) can be applied. Coefficients of backward and forward linkages are derived by the following formulas.

Backward Linkage (BL)

$$\boldsymbol{\alpha_j} = \frac{\sum_i \boldsymbol{b_{ij}}}{\frac{1}{n}\sum_j \sum_i \boldsymbol{b_{ij}}} \qquad \text{(j = 1,2,3,...,n)}$$

Forward Linkage (FL)

$$\boldsymbol{\beta_i} = \frac{\sum_j \boldsymbol{b_{ij}}}{\frac{1}{n}\sum_i \sum_j \boldsymbol{b_{ij}}} \qquad \text{(i = 1,2,3,...,n)}$$

$\alpha_j = Backward\ Linkages\ Index$

$\beta_i = Forward\ Linkages\ Index$

$\sum_i b_{ij} = Row - wise\ Summation\ of\ Inverse\ Matrix$

$\sum_j b_{ij} = \text{Column} - \text{wise Summation of Inverse Matrix}$

$\sum_i \sum_j b_{ij} = Total\ summation\ of\ Row - wise\ Summation\ of\ Inverse\ Matrix$

$\sum_j \sum_i b_{ij} = Total\ Summation\ of\ Column - wise\ Summation\ of\ Inverse\ Matrix$

The linkage index for 2010 – 2015 indicates that agricultural products; rubber chemical and petroleum products; metal, metal products and machinery tend to be forward linkages in terms of an upstream industry because the products of these industries are used as raw materials of other industries. While wholesale and retail trade and services are also considered to be forward linkages since the services sector induced forwardly further to other industries. For backward linkages, they include foods and beverages, non-metallic products, and construction as the downstream industries because these industries require raw materials from upstream industries to produce goods and services for domestic and global consumption.
